SONIC vital XTcoloR

SONIC vital XTcoloR - ULTRASOUND THERAPY UNIT WITH DUAL FREQUENCY TRANSDUCER

OPTIMAL AND QUICK UTILIZATION IN THE PRACTICE

SONIC vital XTcoloR is the newest development of the schwa-medico product range. The ultrasound therapy unit combines modern design and innovative technology such as a dual frequency transducer available in 2 sizes and a favorite list in order to rapidly select the most frequently used programs. This in Germany developed and manufactured unit offers a various list of treatment protocols designed together with european physiotherapists.

The 60 preinstalled programs are listed in two different ways:
- by a global overview
- classified by diseases: acute, sub-acute and chronic.

SONIC vital XTcoloR
- 6 Inches TFT color display
- Integrated clinical guidelines presenting 60 pre-set and 10 user protocols
- List of favorites to be selected within the numerous pre-set programs
- Convenient dual-frequency treatment heads (1 & 3 MHz) with 2 different sizes (1 & 4 cm2) to be connected simultaneously. No need to unplug and plug the different heads: 2 connectors for a user-friendly appliance.
- Water-resistant transducers for underwater treatment
- Contact control function for enhanced safety
- Ergonomically designed with a single pressure rotating button for the selection of all parameters
- Integration of the power supply in the case to avoid sensitive transformers to lay around.
- developed and manufactured in Germany.
